

Bug Report

Date:31-03-2026

Name: B. Lasya Priya

Module Name: Promoter Personal Details – Change Request module

Actual Result

When the new value field contains lengthy text, the content overflows beyond the column width and disturbs the table layout. As a result, the delete option in the action column is not visible as shown in the screenshot. The user is unable to access the delete functionality for that row.

☒ Project Material Facts

CHANGE TYPE

Building Plan No

+ Add Another Change

Field	Old Value	New Value	Description
Project Description	-	njnj	nsnjxnjaj
Project Description	-	iuytresdfg	bb
Building Plan No	-	jhgfdc	uiytrddxfvcjgyyyyyyyyyyyhvctixsavcyquj,zvyaxa78kCUDIUYCWISJXkannXGIUJZL

Expected Result

The table should properly handle long text in the new value field by wrapping the content within the column or truncating it without affecting the layout. The delete option in the action column should always be visible and accessible to the user regardless of the text length.

Actual Result

The system is accepting numeric values and special characters in the District field while adding a new district. The input is saved successfully without any validation, even though the field should contain only valid district names.

☒ Promoter Personal Details

Select Field To Edit

-- Select Field --

+ Add

Field	Old Value	New Value	Description	Document	Action
District	Vijayawada	98765435678987njgfgvgvhhjnju	-	27-03-2027.pdf	×

Expected Result

The system should validate the District field and allow only alphabetic characters. Numeric values and special characters should be restricted, and an appropriate validation message should be displayed to the user when invalid input is entered.

Actual Result

The system allows adding multiple entries with the same name and same document without any restriction. Duplicate records are being created in the table, leading to repeated data entries.

Select Field To Edit

-- Select Field --

+ Add

Field	Old Value	New Value	Description	Document	Action
Mobile Number	9876543212	87654323	-	-	×

Expected Result

The system should prevent duplicate entries with the same name and document. A validation message should be displayed when attempting to add duplicate data, ensuring that each entry remains unique.

Actual Result

The system is accepting invalid email formats in the Email ID field while adding new values. The entered email does not follow proper email structure, but it is still saved without any validation or error message.

Email ID	eswarimadhavarapu912@gmail.com	kjhgfdsdfghjkdsgfghjfdgdfghj@gmail.com	-	-

Expected Result

The system should validate the Email ID field and allow only properly formatted email

addresses. If an invalid email is entered, an appropriate validation message should be displayed and the data should not be saved.

Actual Result

The system is accepting an Aadhaar Number with only 4 digits instead of the required 12 digits. The invalid input is saved successfully without any validation or error message.

Field	Old Value	New Value	Description	
Email ID	eswarimadhavarapu912@gmail.com	lasyapriyaboddu9@gmail.com	-	
Email ID	eswarimadhavarapu912@gmail.com	kjhgfdsdfghjkfdsgfghjfdffghj@gmail.com	-	
Email ID	eswarimadhavarapu912@gmail.com	lasya@gmail.com	sxwxqwszq	
Aadhaar Number	123456789876	98765	-	

Expected Result

The system should validate the Aadhaar Number field and allow only a valid 12 digit

numeric value. If the entered Aadhaar Number is less than or more than 12 digits, an appropriate validation message should be displayed and the data should not be saved.

Actual Result

The system is accepting invalid License Number inputs with different types of characters, including alphabets, numbers, and random combinations without any validation. The entered values are saved successfully even when they do not follow a proper license number format.

License Number	-	jhgfddfghgfd	-	-	×
License Number	-	kjhgfzxcv76543234	-	-	×

Expected Result

The system should validate the License Number field and allow only values that match the

defined format. Invalid combinations of characters should be restricted, and an appropriate validation message should be displayed when incorrect input is entered.

Actual Result

The system is accepting invalid Website URL inputs with incorrect format and random characters. The entered URLs do not follow proper URL structure, but they are still saved without any validation or error message.

Landline Number	-	98766789876543234567653	-	-	X

Expected Result

The system should validate the Landline Number field and allow only valid numeric values as per the required format. Alphabets, special characters, and incorrect number lengths should be restricted, and an appropriate validation message should be displayed when invalid input is entered.

Actual Result

The system is accepting invalid inputs with special characters, numeric values, and random text in both State and District fields. These values are saved successfully without any validation or error message, even though they do not represent valid state or district names.
